

Customize Employee Profiles : (panel 1)

This feature allows the manager (user of the app) to create, update, and remove employees.

We chose this design (panel 2) because it seemed to be the most user friendly

This feature can be accessed from the main page of the app by clicking on a button labeled "Employees" (or some variation thereof)

Customize Employee Profiles (panel 2)

remove

Customize Employee Profiles (panel 3)

The first sketch would be the page the user would encounter immediately after the main page. Each employee would have a button that would link to their profile.

After clicking this button, the sketch below it would be next. This shows their employee ID as well as their name and an option to remove the employee.

From the first sketch, the user would have another option to add an employee. After clicking add, the final sketch would appear. The user would add the employee's name and ID and click "Add" at the bottom to save the employee's information.
