### **Group 11**

#### **Scenario #1**

Micheal is the manager working at Food Lion on Saturdays and Sundays. He is in charge of managing all employees on duty and assigning them specific tasks to handle. He wants to know who all is working those days and make sure that if anyone has asked for a day off, that their duties be assigned to someone else.

Micheal reaches work, turns on his phone and signs into the task manager application. As a manager the software has assigned him admin features such as managing the other employees and viewing an active employee log (who is in and who isn't).

Micheal can see that 20 employees are currently working, along with the time they got in. Employees in the system are ranked on a scale of 1 -5 based on work experience. Also in this software are a list of tasks with a required skill level. Micheal can see who has already been assigned a task and who needs to be assigned to one. Based on the employee's skill levels he matches the best employee to manage the various tasks. Micheal is notified when a task has been completed and the cycle starts over.

#### **Scenario #2**

Chris is an employee running an at home bakery business with his mom. He is responsible for taking and recording orders made by customers, making certain deliveries and cleaning up the shop occasionally. He wants an efficient way to keep track of everything on his daily to list, so that the business does not fail.

Micheal is at home, the phone rings and a customer begins to place an order. Micheal then signs into the task manager to access a list of all tasks. There is an option available to add the order made by the customer to the task list.

## **User Stories**

As a manager, I need a way to to assign and add task for employees to complete while they are on the job

As an employee working from home I need a way to keep track of tasks and orders, to make sure everything is handled in a timely fashion and nothing is missed
